DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 and 9-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Hauser (US Pat. 6,155,251).

The Hauser reference discloses a inhaler dispenser comprising a container 12 with a spring loaded valve stem 20 and an adaptor (18,24) arranged to receive the container and an actuation mechanism including a disc-shaped plunger 36 to facilitate a depressive or squeezing force applied by a user, wherein the actuation mechanism is arranged with springs 48 to automatically restore the container to a closed position (see col. 4, lines 45-67).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hauser in view of Dickinson et al.

Art Unit: 3771

The Hauser reference discloses an inhaler (supra) that includes the dispensing of an aerosolized composition, but is silent as to the propellant of the composition being selected from HFA 134a, HFA 227 and mixtures thereof. The Dickinson reference discloses another inhaler that dispenses an aerosolized composition that includes a propellant selected from HFA 134a and HFA 227 due to its suitability for human consumption in the pharmaceutical field. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to employ a propellant selected from HFA 134a and HFA 227 in the view of the teachings of the Dickinson et al. reference due to its suitability for human consumption in the pharmaceutical field.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Ferris and Sioutas reference pertain to other inhaler dispenser with associated actuation mechanisms.
